Int.A.	**Definition of Graduate Medical Education** ***Fellowship is advanced graduate medical education beyond a core residency program for physicians who desire to enter more specialized practice. Fellowship-trained physicians serve the public by providing subspecialty care, which may also include core medical care, acting as a community resource for expertise in their field, creating and integrating new knowledge into practice, and educating future generations of physicians. Graduate medical education values the strength that a diverse group of physicians brings to medical care, and the importance of inclusive and psychologically safe learning environments.*** ***Fellows who have completed residency are able to practice autonomously in their core specialty. The prior medical experience and expertise of fellows distinguish them from physicians entering residency. The fellow's care of patients within the subspecialty is undertaken with appropriate faculty supervision and conditional independence. Faculty members serve as role models of excellence, compassion, cultural sensitivity, professionalism, and scholarship. The fellow develops deep medical knowledge, patient care skills, and expertise applicable to their focused area of practice. Fellowship is an intensive program of subspecialty clinical and didactic education that focuses on the multidisciplinary care of patients. Fellowship education is often physically, emotionally, and intellectually demanding, and occurs in a variety of clinical learning environments committed to graduate medical education and the well-being of patients, residents, fellows, faculty members, students, and all members of the health care team.***	[None]	***Definition of Graduate Medical Education*** ***Fellowship is advanced graduate medical education beyond a core residency program for physicians who desire to enter more specialized practice. Int.A. - (Continued)	***In addition to clinical education, many fellowship programs advance fellows' skills as physician-scientists. While the ability to create new knowledge within medicine is not exclusive to fellowship-educated physicians, the fellowship experience expands a physician's abilities to pursue hypothesis-driven scientific inquiry that results in contributions to the medical literature and patient care. Beyond the clinical subspecialty expertise achieved, fellows develop mentored relationships built on an infrastructure that promotes collaborative research.***	[None] - (Continued)	***In addition to clinical education, many fellowship programs advance fellows' skills as physician-scientists. Int.B.	**Definition of Subspecialty** Correctional (carceral) medicine seeks to improve the clinical care and safety of incarcerated populations through the provision of health care and promotion of health inside prisons, jails, and other detention facilities, and extends outside of these facilities to the health systems that provide services to individuals while incarcerated and after incarceration. To provide appropriate care for individuals who are incarcerated, physicians must be competent in the prevention and treatment of various health conditions that are common in correctional settings, including emergent and complex health issues and advanced disease. Physicians must be able to facilitate appropriate care transitions when patients enter correctional systems, while patients are incarcerated, and when patients transition to communities. Physicians providing care in the context of correctional settings must be prepared to address the unique situational and organizational demands of health care delivery in a variety of carceral settings, including jails, prisons, juvenile detention centers, and immigration detention centers. Correctional (carceral) medicine also requires a commitment to safety, structural competence, and the practice of cultural humility in meeting the needs of imprisoned or detained patients, including those who are from racial or ethnic minority groups, who have disabilities, who are from low-income backgrounds, who face health literacy challenges, or who are gender nonconforming. IV.	Educational Program The ACGME accreditation system is designed to encourage excellence and innovation in graduate medical education regardless of the organizational affiliation, size, or location of the program. The educational program must support the development of knowledgeable, skillful physicians who provide compassionate care. It is recognized that programs may place different emphasis on research, leadership, public health, etc. It is expected that the program aims will reflect the nuanced program-specific goals for it and its graduates; for example, it is expected that a program aiming to prepare physician-scientists will have a different curriculum from one focusing on community health.	Section 4	Section 4: Educational Program *The ACGME accreditation system is designed to encourage excellence and innovation in graduate medical education regardless of the organizational affiliation, size, or location of the program.* *The educational program must support the development of knowledgeable, skillful physicians who provide compassionate care.* *It is recognized that programs may place different emphasis on research, leadership, public health, etc. It is expected that the program aims will reflect the nuanced program-specific goals for it and its graduates; for example, it is expected that a program aiming to prepare physician-scientists will have a different curriculum from one focusing on community health.*

IV.D.	**Scholarship** ***Medicine is both an art and a science. The physician is a humanistic scientist who cares for patients. This requires the ability to think critically, evaluate the literature, appropriately assimilate new knowledge, and practice lifelong learning. The program and faculty must create an environment that fosters the acquisition of such skills through fellow participation in scholarly activities as defined in the subspecialty-specific Program Requirements. Scholarly activities may include discovery, integration, application, and teaching.*** ***The ACGME recognizes the diversity of fellowships and anticipates that programs prepare physicians for a variety of roles, including clinicians, scientists, and educators. It is expected that the program's scholarship will reflect its mission(s) and aims, and the needs of the community it serves. For example, some programs may concentrate their scholarly activity on quality improvement, population health, and/or teaching, while other programs might choose to utilize more classic forms of biomedical research as the focus for scholarship.***	[None]	**Scholarship** ***Medicine is both an art and a science. The program and faculty must create an environment that fosters the acquisition of such skills through fellow participation in scholarly activities as defined in the subspecialty-specific Program Requirements. Scholarly activities may include discovery, integration, application, and teaching.*** ***The ACGME recognizes the diversity of fellowships and anticipates that programs prepare physicians for a variety of roles, including clinicians, scientists, and educators. It is expected that the program's scholarship will reflect its mission(s) and aims, and the needs of the community it serves. For example, some programs may concentrate their scholarly activity on quality improvement, population health, and/or teaching, while other programs might choose to utilize more classic forms of biomedical research as the focus for scholarship.***
IV.D.1.	**Program Responsibilities**	4.13.	**Program Responsibilities** **The program must demonstrate evidence of scholarly activities, consistent with its mission(s) and aims. (Core)**
