

Major Revision of the Program Requirements for Medical Genetics and Genomics

Background

Every 10 years, the ACGME Review Committees are required to evaluate the applicable specialty-specific Program Requirements for revision. The major revision process for the Program Requirements for Graduate Medical Education in Medical Genetics and Genomics began in the fall of 2024, and the following activities have been conducted to date:

- 1) Interviews were conducted to introduce into the requirements development process the perspectives of medical genetics and genomics patients; geneticists who have recently completed residency; current medical genetics and genomics program directors; representatives from medical genetics and genomics stakeholder organizations; and health care “influencers,” including leaders of health care systems and insurers.
- 2) A literature review was conducted on topics deemed relevant to medical genetics and genomics residency education, now and in the future.

Next Steps

The Writing Group will begin development of the revised Program Requirements in 2025. Before beginning that work, the group seeks stakeholder input, in the form of a survey, on several key areas.

Use the link below to access the survey. **The response deadline is May 19, 2025.**
